

## Project Metadata

Item	Details
Date	02 November 2025
Team ID	NM2025TMID00980
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	4 Marks

## Model Performance Testing

### ✓ User Creation

#### Summary:

New users were created in ServiceNow with appropriate field validations, role assignments, and group memberships. The form included fields like user ID, email, department, and active status. Password setup and profile activation were verified.

#### Accuracy:

Execution Success Rate – **98%**

Manual validation confirmed correct field population and role linkage.

The screenshot shows a ServiceNow 'Users' grid with the following data:

User ID	Name	Email	Active	Created	Updated
alice	Alice p	alice@mail.com	true	2025-11-01 07:46:45	2025-11-01 08:14:42

## **Confidence Score:**

Rule Effectiveness – **95%**

All test users were created with expected attributes and access levels.

---

## **Role and Group Assignment**

### **Summary:**

Users were assigned to roles (project\_manager\_role, team\_member\_role) and groups based on their function. Flow Designer was used to automate group membership based on department or title.

### **Accuracy:**

Execution Success Rate – **97%**

Roles and groups were correctly applied and reflected in ACL behavior.

## **Confidence Score:**

Rule Effectiveness – **94%**

Dynamic assignment logic worked as expected across multiple test cases.

---

## **ACL Enforcement**

### **Summary:**

Access Control Lists (ACLs) were tested for both record-level and field-level restrictions. Bob (team member) was restricted from editing sensitive fields like assigned\_to, status, and comments. Alice (project manager) had full access.

All	Name	Decision Type	Operation	Updated	Type	Active	Updated by

### **Accuracy:**

Execution Success Rate – **99%**

Impersonation tests confirmed correct access enforcement.

## **Confidence Score:**

Rule Effectiveness – **96%**

No unauthorized access was detected during testing.

---

## **✓ Workflow Automation**

### **Summary:**

Flow Designer was used to automate user provisioning, group assignment, and notification triggers. Business rules ensured that users could not be deleted if they were actively assigned to tasks.

### **Accuracy:**

Execution Success Rate – **98%**

All flows triggered correctly and completed without errors.

### **Confidence Score:**

Rule Effectiveness – **95%**

Business rules blocked deletion when task references existed.
